

CYTOMEGALOVIRUS

A virus of the retroviridae pathogen is very common but rarely causes problems in healthy people. Cytomegalovirus is transmitted from one to another through bodily fluids.

40 YEARS OF AGE

Over half of all individuals have been infected with cytomegalovirus and remain dormant in a person's body for the rest of their lives.

1982 & 1992

In Houston, more than thirty-two thousand babies were tested for cytomegalovirus by detecting the virus in their urine.

EMISSIONS

High incidence of congenital CMV in Houston of newborns screened annually was tested positive for about 40–80%

WORLDWIDE

Cytomegalovirus is a worldwide herpesvirus with a high prevalence. It is a virus that is found throughout the world with a prevalence of roughly 100 percent in Africa and Asia, and 80 percent in Europe and North America

TAKE PRECAUTION

Take precaution by washing your hands thoroughly while avoiding touching the face, avoiding contact, sharing of drinks/food especially from the same utensils.
